## OBJECTIVE

Software Engineer with 1+ years of experience in SpiskaUz, seeking full-time strong junior roles.

## EXPERIENCE

### Lead Backend Developer (Spiska.uz)

Freelance Project

Jan 2024 – Apr 2025

*Fergana, Uzbekistan*

- Developed custom object-level permissions to enhance security and access control.
- Optimized database queries and APIs to improve performance.
- Integrated Celery for asynchronous task processing and Docker for CI/CD automation.
- Deployed Redis for caching and Nginx for improved scalability and reliability.

### Bootcamp Node.js Participant

Najot ta'lim

nov 2024 - Present

*Fergana, Uzbekistan*

- Built full-stack apps using Node.js, Express, and MongoDB.
- Collaborated on team projects, applying REST API design and Git workflows.
- Completed over 10 real-world coding tasks and a final group project.

## PROJECTS

**Spiska.uz.** Developed a multi-vendor e-commerce platform with features like custom object-level permissions, product versioning, promo codes, and reporting. Optimized performance using Celery, Redis, and Docker. ([Visit the website](#))

**EduZone.** Developed an interactive education platform for managing online courses, student levels, lessons, and assessments. Implemented user progress tracking, promo code support, and JWT-based access control. Built with Django, Redis, Celery, and Docker.

**Payment Bot – Payment Automation for Paid Telegram Channels.** Developed a Telegram bot to automate payments for subscription-based Telegram channels and groups. Integrated with the Click payment system (UZCARD / HUMO) to process transactions seamlessly. The bot allows users to register for paid channels by entering their card details, and payments are automatically processed monthly. If a payment fails, the bot automatically removes the user from the group/channel. Users can re-subscribe by contacting the bot again. An admin panel provides monitoring and control over users, transactions, and group access.

**Daily Hadith Telegram Bot.** Built a Telegram bot that delivers daily hadiths to users using FastAPI and Python-telegram-bot. Implemented webhook-based communication for seamless interaction with users.

## EDUCATION

Master of Python Django, Najot ta'lim

2024

Python FullStack, Mohirdev

2023

## SKILLS

### Frontend

React JS, Responsive Design

### Backend

Django, FastAPI, Node.js (Express), RESTful APIs

### DevOps & Tools

Docker, docker-compose, Nginx, Ubuntu/Linux CLI, GitHub Actions, Redis, Celery

### Additional

Telegram Bots, Web Scraping, WebSocket/Real-time Chat, Postman, Swagger
